

Carbon-Cover

Facts

- Carbon cover made of real high-tech fibers -
made in Germany ■ ■ ■
- Perfect all around protection for rear wall and edges
- Free access to all functions, keys and plugs
- **No limitation on transmitting and receiving power** through our
newly developed process of manufacture
- Remarkable 3D look in material, shape and precision
- Slip resistant surface
- Extremely thin wall thickness, under 0.4 mm at maximum durability
- Exact CNC treatment of key and camera gaps
- One-hand operation
- Business conforming
- Extra well-fitting
- Extremely light 11 grams

Product description

Our precise carbon covers are extremely thin, material dependent very light and functional protective covers made of the presently best high efficiency fibers such as carbon, aramide (Kevlar), vectran.

A special combination of fiber structure allows manufacture of thinnest covers of one piece - the so-called monocoque - which wraps around the smartphone like a second skin.

As known from Formula 1 or bulletproof vests, these high-tech fibers take up extremely much energy in case of a crash or under fire despite their very thin wall thickness - the so-called impact behaviour - and offer a maximum protection at minimum weight.

These properties make the manufacture of extremely thin-walled and effective protective covers possible which preserve the design and recognition value of the smartphone.

Another important item is the transmitting and receiving power. The extra thin carbon covers do not have any influence on the transmitting and receiving power (no matter whether WiFi-W-Lan, GPS or telephone frequency). We achieve this by making use of the physical properties of high-strength carbon fibers in our newly developed process of manufacture. These special properties result in a reduced energy consumption during sending and transmitting.

Due to the discreet appearance and the minimalistic wall thickness, our carbon cases are designed for daily use of the design and quality conscious group of buyers.

The unremarkable and comfortable carrying in jacket or trouser pockets, the conformity in everyday business life as well as the one-hand operation and receiving neutrality with good protection of the smartphones are important to us.
