

CAIRON TopUp

Versatile prepaid credit recharge

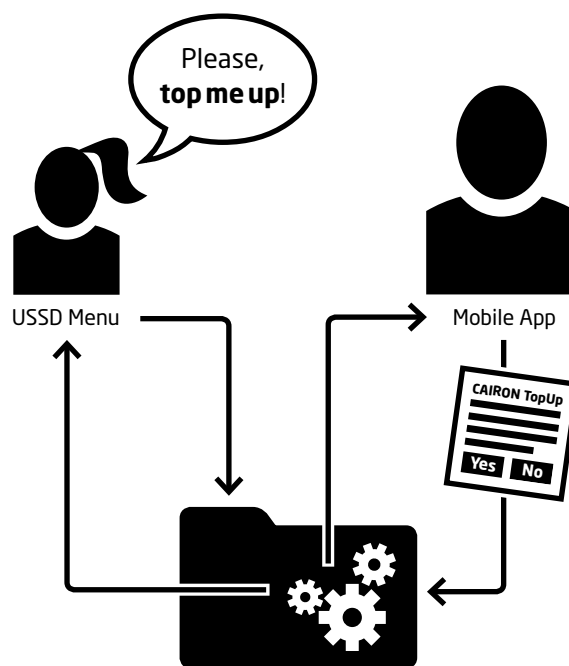

TOPUP

Versatile prepaid credit recharge

Our TopUp platform offers a cost-effective and highly configurable solution that enables operators to bring versatile prepaid credit recharge methods to their subscribers. For instance, subscribers that have registered their debit or credit card with the service can easily recharge their prepaid accounts by sending a simple text message in predefined format, or additionally, over an USSD menu session.

E-vouchers and scratch-cards can also be used as a means to recharge prepaid accounts. Also, friends and family prepaid accounts can also be recharged, or subscribers can send requests for credit recharge to their family members.

Extensive USSD integration makes it possible for subscribers to recharge their prepaid accounts without hidden costs even when roaming. Our TopUp offers easy and secure integration with e-bank solutions and third party billing gateways.
