# Tech Specs

### Hardware

Interface	1 x WAN Ethernet port 2 x LAN Ethernet port 3 x LEDs 1 x USB 3.0 port
CPU	IPQ4028 Quad-core ARM, @717MHz SoC
Memory / Storage	DDR3L 256MB / FLASH 32MB
Antennas	Internal
Protocol	802.11a/b/g/n/ac
Wi-Fi Speed	2.4GHz(400Mbps), 5GHz(867Mbps)
TX power	2.4GHz: 20dBm (11b) Max, 5GHz: 20dBm (11a) Max
Ethernet Port	3 x 10/100/1000M
LEDs	Wireless status indication / Mesh LED / Power supply
Power Input	12V/1.5A
PoE Support	Optional (works with 48V PoE injector only)
Power Consumption	<7W
Working Temperature	-20~40°C (-4~104°F)
Storage Temperature	-20~70°C (-4~158°F)
Dimension / Weight	117 x 117 x 35mm / 212g

### App Compatibility

Internet Controller Business App: Android 4.3+ / iOS 10+

BUSINESS

Why your business customers  
need internet controls.

# Easy to use internet controls for your business

- ✓ Limit employees personal use of company internet
- ✓ Manage & assign bandwidth to departments, employees or devices
- ✓ Improve employee productivity
- ✓ Manage cyber security risks including malware, antivirus, ad blocking & more
- ✓ All managed using one simple to use app

## Reduce Cyber Security Risks

An employee browsing potentially dangerous websites without control can open your business to an array of security risks, such as viruses, trojans, spyware – the list goes on. This is because non work-related websites are a major feed of threats to the business network. These put individual devices at risk but can also bring companies down for days when a nasty virus gets into the network.

## Manage Bandwidth Use

Your internet connections are typically the main artery for your business, the main communication line between your business, your customers, and your suppliers. If your employees are downloading non work-related files, listening to music or watching the news then you'll be paying for that. What do you do when people say that internet browsing is slow? You typically put your hand in your pocket to upgrade.

You do not need to upgrade connectivity (internet or WAN connections). You just need to route, control and shape the traffic on your networks more efficiently.

## Improve Productivity

Your employees' browsing the internet during work time costs your business money. The average employee spends 15 minutes of time browsing the internet during working time and up to an hour a day in some cases for nonbusiness related purposes. That's 10 to 40 hours a day for a 40 computer-based employee company.

It can cost thousands per week on browsing time, without considering loss of productivity and potential earnings.

# Internet controls save you money

- ✓ Reduce bandwidth costs
- ✓ Increase productivity and earnings
- ✓ Reduce financial risk of cyber attack

# How does it work?

- ✓ Simple plug & play device in the workplace
- ✓ Manage workplace, teams or any devices internet access from one easy to use app
